Report Overview

The market for common type graphite is characterized by its widespread use in industries such as steelmaking, refractories, batteries, and lubricants due to its high thermal and electrical conductivity, chemical stability, and mechanical strength. Demand is driven by the steel industry, where graphite electrodes are essential for electric arc furnaces, as well as by the growing lithium-ion battery sector, which relies on graphite for anodes. Supply is dominated by China, which accounts for the majority of global production, followed by countries like India, Brazil, and Canada. Price fluctuations are influenced by raw material availability, energy costs, and environmental regulations, particularly in China, where stricter policies have impacted production. The market is also seeing increased competition from synthetic graphite, especially in high-precision applications, though natural graphite remains cost-effective for bulk industrial use. Sustainability concerns and the push for greener production methods are shaping future trends, with recycling and alternative extraction methods gaining attention.
