Abstracts

A Compact Antenna Test Range (CATR) system is a specialized testing setup used for evaluating the performance of antennas in a controlled environment. It simulates far-field conditions within a compact indoor space by utilizing a parabolic reflector to convert spherical waves into plane waves, enabling accurate measurements of antenna characteristics such as gain, radiation patterns, and beamwidth. CATR systems are ideal for testing high-frequency antennas, including those used in satellites, radar, and wireless communication devices. They offer precise, repeatable results while reducing the need for large outdoor test ranges, making them a critical tool in aerospace, defense, and telecommunications industries for antenna development and validation.

The global Compact Antenna Test Range Catr System market size was estimated at USD 185.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
