### Report Overview

The compact banknote sorter is a specialized financial device designed to efficiently count, sort, and authenticate paper currency, typically used in retail environments, banks, and cash-intensive businesses. These machines are engineered to handle high volumes of banknotes while minimizing errors, detecting counterfeit bills, and organizing currency by denomination, series, or condition. Compact models prioritize space-saving designs without compromising processing speed or accuracy, making them ideal for small to medium-sized businesses that require reliable cash handling but have limited counter space. Advanced features often include batch counting, counterfeit detection using ultraviolet (UV), magnetic (MG), or infrared (IR) sensors, and connectivity options for integration with point-of-sale (POS) systems or back-office software.
