Abstracts

Compact Platelet Heat Exchangers (CPHX) are a type of highly efficient heat exchanger that uses thin, corrugated metal plates arranged in a compact configuration to transfer heat between two fluids. These heat exchangers are designed to maximize the surface area for heat exchange while minimizing the volume and weight of the unit, making them particularly effective in applications where space is limited. The 'platelet' design refers to the use of small, flat plates that create multiple channels for fluid flow, allowing for a high degree of thermal efficiency and effectiveness in heat transfer. CPHX are commonly used in various industries, including HVAC (heating, ventilation, and air conditioning), refrigeration, chemical processing, and power generation, where they contribute to energy savings and process efficiency by providing rapid heat exchange in a compact form factor. Their design also allows for easy cleaning and maintenance, further enhancing their practicality in industrial applications.

The global Compact Platelet Heat Exchangers Cphx market size was estimated at USD 325.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
