Report Overview

At present, the membrane widely used in the alkaline hydrogen production industry is a new type of composite membrane based on polyphenylene sulfide (PPS) fabric. Among them, PPS fabric as a substrate can provide certain physical support, and PPS fabric has the characteristics of excellent heat resistance, high mechanical strength, and excellent electrical performance. However, the hydrophilicity of PPS fabric is too weak. If only PPS fabric is used as a separator, it will cause excessive resistance in the electrolytic cell. Therefore, it is necessary to modify PPS fabric to enhance its hydrophilicity.
