### Report Overview

Compostable cling film is a type of packaging material designed to wrap and protect food items while being environmentally friendly. Made from biodegradable polymers such as polylactic acid (PLA), polyhydroxyalkanoates (PHA), starch-based materials, or cellulose, this film is engineered to decompose into natural substances in composting environments, either industrial or home composting systems. Compostable cling film provides similar functionality to traditional plastic cling film, including high clarity, good cling properties, and barrier protection against moisture and gases, but with the added benefit of reducing plastic waste and environmental impact by breaking down into compost instead of lingering in landfills. Development trends focus on enhancing the film's performance characteristics and expanding its applications to meet growing consumer and regulatory demands for sustainable packaging solutions.
