Report Overview

Compound α -Ketoacid Tablets are a medical supplement primarily used in the management of chronic kidney disease (CKD) and other metabolic disorders where protein metabolism is impaired. These tablets contain essential α -keto acid analogs of amino acids, which help reduce nitrogen load on the kidneys by substituting for traditional protein sources in the diet while still providing necessary nutrients for protein synthesis. They are often prescribed alongside a low-protein diet to slow CKD progression, minimize uremic symptoms, and improve patient outcomes. The product is particularly beneficial for patients in stages 3-5 of CKD, as it helps regulate serum urea and creatinine levels while maintaining nutritional balance. Demand for such supplements is driven by the rising prevalence of CKD globally, increasing awareness of renal nutrition management, and advancements in nephrology care. The market is also influenced by healthcare policies, reimbursement scenarios, and the growing geriatric population, which is more susceptible to kidney-related ailments.
