Report Overview

A Compression Latch is a type of fastening mechanism commonly used in various applications, such as securing doors, gates, and cabinets. It is designed to provide a strong and reliable hold by utilizing a compression force between two components. The latch typically consists of a latch body, a compression spring, and a release mechanism. When the latch is engaged, the spring exerts pressure on the latch body, ensuring a tight and secure fit. The release mechanism, often in the form of a lever or button, allows for easy disengagement of the latch when needed. Compression Latches are valued for their durability, ease of use, and ability to withstand repeated use without compromising their performance. They are often preferred in environments where a high level of security and reliability is required, such as in industrial settings, commercial buildings, and residential applications.
