Report Overview

A Compression Tube Fitting is a type of mechanical connection used in fluid systems, particularly for joining tubes made of materials such as copper, aluminum, or steel. It consists of a ferrule, nut, and a compression fitting body. The ferrule is a cylindrical component that is inserted into the tube and then compressed against the tube's end to create a seal. The nut is tightened onto the fitting body, which has a conical or tapered seat, causing the ferrule to compress the tube and create a secure connection. This type of fitting is known for its reliability, ease of installation, and ability to withstand high pressures and temperatures. Compression tube fittings are commonly used in applications such as plumbing, HVAC systems, and industrial process control, where leak-proof connections are critical.
