Abstracts

Computer-aided translation (CAT), also known as machine-aided translation (MAT) or machine-aided human translation (MAHT), is the use of Computer-aided Translation Software to assist human translation in the translation process. The translation is created by humans, and some aspects of the process are facilitated by software; this is in contrast to machine translation (MT), where the translation is created by a computer, and some manual intervention (such as pre-editing and post-editing) is optional).The core driving force behind the growth of the computer-aided translation software market comes from diverse demands. Internationalization requires localization of websites, product documentation, marketing materials, and software interfaces; cross-border e-commerce transactions rely on accurate translation of product information; and professional fields such as academic research, news media, and legal documents also maintain a steady demand for high-quality translation. These demands together constitute a solid market foundation. Technology and cloud computing are becoming mainstream: Early stand-alone desktop software is rapidly being replaced by a cloud-based SaaS model. Cloud-based CAT tools support anytime, anywhere collaboration, offer clear version management, and enable real-time sharing and updating of translation memories and terminology databases, significantly improving team collaboration efficiency and project management transparency. Furthermore, the deep integration of artificial intelligence is another major trend. The combination of neural machine translation and CAT tools has created an "intelligent human-machine collaborative" workflow. Translators have shifted from simply executing translations to optimizing machine translation results through post-editing. This further significantly improves productivity.

The global Computer-aided Translation Software market size was estimated at USD 558.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 16.50% during the forecast period.
