## Abstracts

Computer-generated imagery (CGI) is the application of computer graphics to create or contribute to images in art, printed media, video games, films, television programs, shorts, commercials, videos, and simulators. The visual scenes may be dynamic or static and may be two-dimensional (2D), though the term "CGI" is most commonly used to refer to 3D computer graphics used for creating scenes or special effects in films and television. The amount spent on advertisements, by companies can be reduced to a greater extent by using CGI. There is no need to hire professionals who have extensive knowledge of photography and videography. It uses the latest software to create the images you want in the ad instead of visiting the exotic locations to shoot the ad to get the best backdrop required to show your products in an appealing way to customers. The best thing is that you do not need to waste time visiting locations and shooting the ad; instead, you can hire CGI experts. These people will use their skills and add the backdrop that you want for the products with just a few mouse clicks. The ad would look appealing and would grab the eyes of the audience. This cuts down the travelling expenses that otherwise must be paid to the photo shoots.

The global Computer-generated Imagery (CGI) Services market size was estimated at USD 4542.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
