Abstracts

Condom catheters are external urinary catheters that are worn like a condom. They collect urine as it drains out of your bladder and send it to a collection bag strapped to your leg. They're typically used by men who have urinary incontinence (can't control their bladder). A significant driver in the Urinary External Catheter market is the increasing awareness of catheter-associated complications and the need for more comfortable and less invasive urinary management solutions. Urinary external catheters, often made of silicone or latex, provide a convenient and less intrusive option for individuals with urinary incontinence or retention. However, a notable challenge in this market is the need for patient comfort and skin integrity. Ensuring that external catheters are designed to minimize skin irritation, maintain secure attachment, and offer reliable performance while addressing potential challenges related to allergies or discomfort poses a significant challenge. Healthcare providers and manufacturers must prioritize patient-centric design, skin-friendly materials, and user education to enhance the comfort and effectiveness of urinary external catheters, ultimately improving the quality of life for individuals in need of urinary management solutions.

The global Condom Catheters market size was estimated at USD 1475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
