### Report Overview

Conductive carbon black water-based dispersant is a chemical specifically designed to improve the dispersibility of conductive carbon black in aqueous systems. In applications such as water-based coatings, inks, plastics, composite materials, and conductive slurries, conductive carbon black is often used as a conductive filler to endow products with conductivity or electrostatic dissipation properties. However, due to the high specific surface area and strong aggregation tendency of conductive carbon black, simply adding it to aqueous systems often leads to aggregation, thereby affecting the conductivity and physical properties of the product.
