Report Overview

A conductive liquid flow meter is a type of flow meter that uses the principle of electromagnetic induction to measure the velocity of a conductive liquid flowing through a pipe. The meter consists of a pair of electrodes that are mounted on opposite sides of the pipe. When a conductive liquid flows through the pipe, it creates a magnetic field that is proportional to the velocity of the liquid. The electrodes measure the voltage induced by the magnetic field, and this voltage is used to calculate the velocity of the liquid.
