Abstracts

Cone Co-rotating Twin-screw Extruder means that the screw shape in the extruder is conical, and the rotation direction of the two screws is the same. The extruder using conical co-directional twin screw technology is called conical co-directional twin screw extruder. The advantages of conical twin screw extruder are large extrusion force, but poor plasticizing performance, low output and high energy consumption; Although the parallel twin-screw granulator has good plasticizing performance, it has small extrusion force, low output and large energy consumption, so it is not satisfactory in actual use. In order to overcome the above shortcomings, the conical twin screw extruder has not only good plasticizing performance, but also good extrusion force. The conical twin screw extruder, whose conical screw rotates in the same direction, makes the processed plastic in the barrel after entering the barrel, in the barrel around the conical twin screw into a figure-8 extrusion, increase the plasticizing time, reduce the friction between the plastic and the barrel screw, so as to ensure the plasticizing quality, reduce energy consumption; Because the screw used is conical, the good extrusion force performance of the conical twin-screw granulator is maintained.

The global Cone Co Rotating Twin Screw Extruder market size was estimated at USD 1450.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
