### Report Overview

Construction engines, also known as heavy-duty diesel engines, are specialized power units designed for heavy machinery used in construction, mining, and infrastructure development. These engines are built to withstand extreme conditions, deliver high torque at low RPMs, and operate efficiently under continuous heavy loads. They power equipment such as excavators, bulldozers, loaders, cranes, and compactors, with power outputs ranging from 50 to over 1,000 horsepower. Key features include advanced fuel injection systems, turbocharging, and emissions control technologies to comply with stringent environmental regulations like Tier 4 Final and Euro VI standards. The market is driven by demand for infrastructure development, urbanization, and replacement cycles of aging equipment, though it faces challenges from rising fuel costs, electrification trends, and regulatory pressures to reduce carbon emissions.
