### Report Overview

Construction Grade Hydroxypropyl Methyl Cellulose (HPMC) is a cellulose ether derivative widely used in cement-based materials, mortars, and gypsum products to improve workability, water retention, adhesion, and durability. It acts as a thickening agent, preventing sagging in vertical applications, while also reducing cracking by slowing water evaporation. HPMC is chemically modified to enhance solubility and stability in alkaline environments, making it indispensable in modern construction for tile adhesives, self-leveling compounds, renders, and exterior insulation systems. Its biodegradability and non-toxic nature further align with sustainable building practices, driving demand in eco-conscious projects. The product's performance varies by viscosity, substitution degree, and particle size, with manufacturers tailoring formulations to meet specific construction requirements.
