### Report Overview

A Continuous Flight Auger Pile (CFAP) is a type of deep foundation system commonly used in construction projects to provide support and stability to structures. It is created by drilling a continuous spiral-shaped steel auger into the ground, simultaneously mixing the soil with concrete or grout to form a solid, cylindrical pile. The CFAP is known for its versatility, as it can be adapted to various soil conditions and depths, and its efficiency, as it minimizes the need for excavation and spoil disposal. This method is particularly advantageous in urban environments where space is limited and in situations where minimal disruption to the surrounding area is required.
