Report Overview

Continuous strand mat is a randomly oriented fiber that differs from chopped strand mat in that it is a continuous long fiber rather than chopped fibers. Continuous strand mat is made by dispensing molten glass strands directly onto a moving belt in an endless pattern. A binder is used to hold the filaments in place as the glass fibers cool and harden. The mat is then trimmed and rolled. Continuous strand mat is most commonly used in closed molding applications such as vacuum infusion processing, resin transfer molding, cold forming, and compression molding. It has similar properties to chopped strand mat, with volume characteristics that facilitate filling the mold cavity in closed molding processes.
