Abstracts

A contour machine is a machine tool for cutting sheet metal and steel. Also called a band saw, as the name implies, it can cut sheet metal and steel by rotating a band saw (a metal wheel with a saw blade). The sheet metal or steel material is prescribed, and the workpiece is moved along the line and pressed against it as it is processed. A relatively small contour machine can process not only straight lines but also any desired shape, such as a rounded edge. Larger machines are designed to cut thicker steel materials, so they do not allow as much freedom in the cutting process.

The global Contour Machine market size was estimated at USD 875.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
