Report Overview

A Controlled Saturable Reactor is a device that utilizes the saturation characteristics of magnetic materials to regulate the inductive reactance of an AC inductor by controlling a DC current. It is used in power systems for voltage, current, or power factor regulation, particularly in high-voltage and high-power applications. The operating principle involves adjusting the DC bias current applied to the core winding, which changes the magnetic permeability of the core and thus controls the amount of AC current passing through.
