Abstracts

The Converged Charging System (CCS) is a solution in the telecommunications industry that enables unified management of all users and services for operators. It encompasses the convergence of payment methods, such as prepaid and postpaid, as well as access methods and services, such as fixed-line, mobile, broadband, and television. The CCS enables real-time service control and balance management. For example, it authenticates users and checks account balances before providing services, notifies users when operator-defined account balance thresholds are reached, and terminates service connections when real-time billing indicates depleted credit limits. Artificial intelligence can be used to automate many billing-related tasks, such as payment processing, fraud detection, and report generation, improving the accuracy and speed of the billing process. Data analytics help operators better understand their customers and their needs, enabling them to develop more personalized rate plans and service packages. Cloud computing can be used to deploy and operate converged billing systems, helping operators save on infrastructure and software costs while providing greater flexibility and scalability. With the widespread adoption of 5G networks, operators require converged billing systems to monetize 5G services, as they support a wider range of billable services. The growth of the Internet of Things will lead to an increase in the number of devices that require connectivity and billing, and converged billing systems must be able to handle the massive amounts of data generated by these devices, driving growth in the converged billing system market. The rise of the mobile virtual network operator/enabler (MVNO/E) business model and the increasing number of mobile network operators launching sub-brands to target specific consumer and enterprise market segments are creating demand for converged billing systems, as they provide flexibility and responsiveness for these new brands.

The global Converged Charging System market size was estimated at USD 2912.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
