## Abstracts

Converged infrastructure breaks down traditional IT infrastructure silos by providing pre-configured bundles of hardware and software in a single chassis. Converged infrastructure packages compute, networking, and storage together and links them using software. Other names for this approach to infrastructure are ?unified computing? or ?datacenter in a box?. The future market trends of CIPs are driven by the increasing demand for data security, cloud-based solutions, IT operational efficiency, and digital transformation. Some of the key trends to watch in the CIP market are: The adoption of CIPs in the BFSI sector, as financial institutions seek to improve their customer experience, data protection, and IT agility. CIPs can help them achieve faster deployments, lower costs, and higher performance for their mission-critical applications and services. The emergence of AWS Outposts, a hybrid cloud solution that offers CIPs based on Amazon Web Services (AWS) technology. AWS Outposts allows customers to run AWS services on-premises, while seamlessly integrating with the AWS cloud. This can provide customers with more flexibility, consistency, and control over their IT environments. The advancement of automation and orchestration capabilities in CIPs, which can enable IT teams to streamline and optimize their workflows, processes, and policies. Automation and orchestration can help IT teams reduce human errors, improve efficiency, and enhance service quality and reliability. The expansion of edge data centers, which are small-scale, distributed IT facilities that are located close to the end-users or data sources. Edge data centers can provide low-latency, high-bandwidth, and real-time data processing and analytics for applications such as IoT, 5G, and AI. CIPs can be an ideal solution for edge data centers, as they can offer easy deployment, management, and scalability.
