Report Overview

A conversion fitting is a type of fitting that connects, redirects, and branches pipes of different types. Pipes are made of different materials, such as alloy steel pipe, stainless steel pipe, aluminum pipe, copper pipe, polyethylene pipe, and each material is used according to the type of fluid to be transported, the purpose of transport, and the environment surrounding the pipe. However, conversion fittings are used in situations such as when pipes of different materials are used inside and outside a building, or when different types of pipes are connected to existing pipes during renovation work, etc. In addition, there are situations where different types of threads are connected using the screw-in method, which is one of the connection methods of fittings. Fittings used in such situations are specifically referred to as screw conversion fittings.
