Report Overview

Copper Clad Steel Strips are composite materials that consist of a steel core, which provides strength and rigidity, and a thin layer of copper on the surface. This product is engineered to combine the electrical conductivity and corrosion resistance of copper with the mechanical strength and cost-effectiveness of steel. The copper layer ensures excellent electrical and thermal conductivity, making these strips suitable for applications requiring efficient heat dissipation and electrical grounding. Additionally, the copper cladding offers a protective barrier against corrosion, enhancing the durability of the steel core. Copper Clad Steel Strips are commonly used in various industries, such as electronics, telecommunications, and construction, for applications like grounding, shielding, and electromagnetic interference (EMI) reduction. The product is also valued for its ability to withstand harsh environmental conditions and for its aesthetic appeal, as the copper surface can be polished to a high shine or treated for specific finishes.
