Report Overview

Copper Cut Wire Shot is a specialized abrasive material used in various industrial applications, primarily for surface finishing, cleaning, and polishing. It is made from high-quality copper wire that has been cut into small, uniform pieces, creating a shot-like appearance. These copper particles are then used as a blasting media in processes such as shot peening, deburring, and removing surface imperfections from metals, plastics, and other materials. The copper cut wire shot is known for its excellent ductility and softness, which allows it to conform to the shape of the workpiece without causing damage or excessive wear. It is particularly effective in applications where a softer abrasive is required to prevent damage to delicate or sensitive surfaces, and it is also appreciated for its ability to reduce the risk of embedded abrasives in the workpiece. This product is widely used in industries such as aerospace, automotive, and precision engineering due to its ability to improve surface quality and extend the life of components.
