### Report Overview

Copper-zinc solder is a copper-based solder that mainly contains zinc as an alloy element. The melting point of copper-zinc solder decreases with the increase of zinc content, generally around 40%. Other elements, such as silicon, tin, silver, iron, manganese, nickel, etc., can also be added to copper-zinc solder to improve its fluidity, strength, corrosion resistance and wettability. Copper-zinc filler metal is suitable for brazing copper and copper alloys, steel and gray cast iron, but cannot be used for vacuum brazing because zinc is easy to evaporate.
