Report Overview

A cordless laparoscopic morcellator is a surgical device used in laparoscopic surgeries to perform morcellation, which involves fragmenting and removing large tissue masses, such as fibroids or tumors, through small incisions. Unlike traditional morcellators connected to a power source via cords, the cordless version is self-contained and powered by a rechargeable battery. It consists of a handheld unit with rotating blades that enable controlled and efficient tissue fragmentation. The cordless design offers greater mobility, freedom of movement, and flexibility during the procedure, allowing surgeons to navigate and access hard-to-reach areas with ease.
