## Abstracts

Corona treatment is a surface modification process that uses an electrical discharge to increase the surface energy of materials, resulting in improved wetting, adhesion, and printing capabilities. A Corona Treatment System is a machine that is specifically designed to perform this process. The system typically includes a corona discharge generator, an electrode assembly, and a material handling system. Corona Treatment Systems can be designed to handle a wide range of materials, including papers, films, fabrics, plastics, and metals. The system can be customized based on the material type, thickness, and width, as well as the desired treatment level. The Corona Treatment System is widely used in the plastics, printing, packaging, and automotive industries, where it is used to prepare surfaces for printing, laminating, and coating. It is also used to improve adhesion in composite materials and to reduce static charges on plastics and films. Global key players of corona treatment system include Baldwin Ahlbrandt, Enercon Industries, Pillar Technologies (ITW), Arcotec, Corotec (Inductotherm), etc. The top five players hold a share over 30%.
