Abstracts

Corrosion inhibitors are chemicals used in water treatment to prevent or reduce the rate of corrosion in metal surfaces exposed to water. Corrosion can lead to significant damage in industrial systems, pipelines, and water treatment facilities, affecting performance and safety. Corrosion inhibitors for water treatment are chemical substances used to prevent or slow down the corrosion of metal surfaces in water systems, widely applied in industrial, agricultural, and municipal facilities. These inhibitors primarily work by forming a protective film on the metal surface, preventing water, oxygen, and other corrosive ions from reacting with the metal, thereby reducing damage. Corrosion is a major issue in cooling water systems, boilers, and desalination plants, as it can shorten the lifespan of equipment and increase operational costs. Therefore, corrosion inhibitors play a critical role in maintaining the efficiency and longevity of water treatment systems. Commonly used corrosion inhibitors include phosphates, molybdates, zinc salts, and organic amines, which operate through different mechanisms to form an oxide layer or adsorption film on metal surfaces, inhibiting the corrosion process. However, with increasingly stringent environmental regulations, traditional inhibitors such as phosphates are being restricted due to their negative environmental impact. As a result, the development and use of eco-friendly corrosion inhibitors, such as polymer-based and bio-based inhibitors, have become a growing trend in the market. The global market for water treatment corrosion inhibitors is steadily growing, driven by industrialization and increasing environmental awareness. Industries like oil and gas, and power generation, where corrosion issues are particularly severe, provide significant growth opportunities for this sector. As water resources become scarcer and treatment technologies evolve, the application of corrosion inhibitors in water treatment is expected to expand further. Developing efficient and environmentally friendly inhibitors will be key to future market success.

The global Corrosion Inhibitor for Water Treatment market size was estimated at USD 2348.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
