Report Overview

Corrugated board base is a type of packaging material that consists of a fluted corrugated sheet and one or two flat linerboards. It is widely used in the manufacturing of corrugated boxes and packaging materials due to its strength, durability, and recyclability. The product is made by sandwiching a corrugated medium, which is a paper material with a wavy or ridged pattern, between two flat linerboards. The linerboards are typically made from kraft paper, which provides a smooth surface for printing and a strong bond with the corrugated medium. The combination of these materials results in a lightweight yet sturdy base that can withstand the weight of packaged goods and protect them during transportation. The corrugated board base is an essential component in the production of various types of corrugated packaging, making it a critical element in the supply chain for a wide range of industries.
