## Abstracts

Cosmetic painless microneedle transdermal patches are an innovative skincare technology designed to deliver active ingredients directly into the skin without causing discomfort. These patches contain tiny, dissolvable needles made of biocompatible materials that painlessly penetrate the outer layer of the skin, allowing for deeper absorption of active compounds. This method enhances the efficacy of skincare treatments, such as anti-aging, hydration, and brightening. Continuous improvements in microneedle technology are making these patches more effective and accessible. Innovations include the development of longer-lasting patches, enhanced needle designs for better ingredient delivery, and the incorporation of smart technologies that monitor skin conditions.
