Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cough Oral Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cough oral solutions are liquid preparations primarily used to relieve cough symptoms, especially those accompanied by phlegm or respiratory irritation. They effectively relieve respiratory symptoms such as dry cough, wet cough, chest tightness, and difficulty in expectorating phlegm, improving patients' quality of life. The product has an average price of approximately US\$5.5 per unit, with global sales of approximately 185.8 million units. The upstream of the cough oral solution industry chain mainly focuses on the supply of raw materials (such as dextromethorphan and guaiaicol glycerol ether) and excipients (syrup base, flavorings, stabilizers, etc.), which determine the product's efficacy and taste. The downstream encompasses hospital clinical prescriptions, retail pharmacy sales, and OTC distribution through e-commerce platforms, forming a multi-tiered market structure. Future development trends will place greater emphasis on plant extracts and low-side-effect formulations to meet consumer demand for safety and natural ingredients. Simultaneously, the rapid expansion of online retail and cross-border e-commerce will drive the global adoption of cough oral solutions, especially in emerging markets such as Southeast Asia and Africa. Overall, the industry chain is evolving towards greening, intelligentization, and internationalization, with upstream raw material innovation and downstream channel expansion jointly driving continued market growth.

The global Cough Oral Solution market size was estimated at USD 1022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
