Report Overview

A counter UAS device is a device used to detect, identify and neutralize UAS and is designed to protect a specific area from drone intrusion or threats. These devices usually use various technologies and methods, including radar, optical/infrared sensors, signal jamming, radio frequency detection and jamming, laser, etc., to monitor and locate flying UAS in real time and take appropriate measures to deal with them. Threats, such as interfering with the control signals of drones, intercepting drones, launching signal jammers to interfere with their navigation systems, or using lasers to destroy UAS. These devices are often used to protect important facilities, public venues, military bases, government buildings, sports events and other places to prevent illegal intrusion, surveillance or potential attacks by drones. As UAS technology proliferates and continues to evolve, so does the need for counter-drone devices to ensure public safety and protect critical infrastructure.
