Report Overview

Crisaborole API, or Anacor Pharmaceuticals' crisaborole, is a novel, non-steroidal phosphodiesterase 4 (PDE4) inhibitor used in the treatment of various skin conditions. It is a topical medication that works by modulating the activity of PDE4, an enzyme involved in the inflammatory response. By inhibiting PDE4, crisaborole reduces inflammation and alleviates symptoms associated with skin disorders such as eczema and psoriasis. The API form of crisaborole allows for its integration into pharmaceutical formulations, enabling the development of topical creams or ointments for the targeted treatment of these conditions. As a non-steroidal alternative, crisaborole offers a potential advantage over traditional steroid-based treatments, as it may reduce the risk of side effects commonly associated with long-term steroid use.
