### Report Overview

Critical Dimension SEM (CD-SEM) is a specialized system for measuring the dimensions of fine patterns formed on semiconductor wafers. It can measure resist pattern dimensions, quality control of deposited layers, and surface morphology. CD-SEM makes measurements by emitting a beam of electrons that interact with electrons in the material being scanned. It sends back the signal mapped by the device. The more critical dimensions that need to be mapped, the greater the amount of data that needs to be processed and stored.
