## Abstracts

Critical event management (CEM) platforms enable businesses and government agencies to proactively prepare for, respond to, and recover from incidents that threaten people and assets. These solutions centralize business continuity, natural disaster response, crisis and emergency management, IT risk management, and mass alerting and notification functions in one system. They integrate with key workforce and communications systems to bolster incident response. With a CEM platform, businesses and government teams can create emergency response plans, establish task assignments, plan for "what if?" scenarios, and assess threats in real time to promote crisis prevention. By connecting with GIS tools and communication channels, users can track the locations of all threatened people and provide updates, receive geo-tagged media to monitor incidents on the field and communicate with public and private emergency response officials. After an event has been resolved, CEM platforms enable users to audit data and determine the efficiency of their response, allowing them to alter their response plan for future critical events. Driven by the need for centralized management and rapid response across multiple system incident sources (IT, security, equipment, operations, etc.), enterprises are increasingly adopting solutions featuring cloud or hybrid deployments, unified alarms and work orders, automated workflows, and mobile on-site handling capabilities. Platforms emphasize unified event orchestration, prioritization strategies, root cause analysis, and real-time collaboration, gradually integrating intelligent functions such as AI diagnostics, predictive alarms, and continuous improvement analysis to enhance fault repair timeliness and operational availability. Simultaneously, data interoperability, security compliance, scalability, and customized services have become key competitive factors for vendors, with the market moving towards vertical industry customization and end-to-end service-oriented architectures.

The global Critical Event Management (CEM) Platforms Software market size was estimated at USD 427.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
