## Abstracts

Cross linked polyolefin shrink film is a type of polymeric film made by cross linking polyethylene or polypropylene. The crosslinking creates a more stable structure compared to uncrosslinked films, resulting in better heat and moisture resistance, improved tensile strength and puncture resistance, lower density, higher opacity, and reduced shrinking ability. This makes it ideal for many different types of packaging applications, particularly those involving high temperatures or humid environments.

The global Cross Linked Polyolefin Shrink Film market size was estimated at USD 2850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
