Report Overview

A Cryo-Focused Ion Beam Scanning Electron Microscope (Cryo-FIB-SEM) is a state-of-the-SEM technology that combines cryogenic sample preparation with focused ion beam (FIB) milling and scanning electron microscopy (SEM) imaging. This advanced microscope is designed to study biological specimens, materials science samples, and nanostructures in their native, frozen-hydrated state, preserving their native structure and minimizing artifacts caused by dehydration or staining. The Cryo-FIB-SEM allows for precise, site-specific milling of the sample to reveal internal structures, followed by high-resolution imaging using the SEM. This technique is particularly valuable for studying complex biological structures, such as cells and tissues, at the nanoscale, as well as for materials characterization in fields like nanotechnology and semiconductor manufacturing.
