Report Overview

Cryogenic Liquid Flow Meter is an instrument for measuring the flow of cryogenic liquids. Cryogenic liquids usually refer to liquid oxygen, liquid nitrogen, liquid argon and other gases that are in liquid state at room temperature. These liquids have extremely low temperature and high density, and their flow properties and measurement methods are different from ordinary liquids. Cryogenic Liquid Flow Meter usually uses special flow measurement principles and materials to meet the measurement requirements in low temperature environments. For example, the common cryogenic liquid flowmeter adopts the principle of vortex street measurement to measure the liquid flow through the vortex street sensor, and uses special materials and insulation design to ensure the stability and reliability of the sensor.
