Report Overview

A Crystalline Photovoltaic Module, also known as a Crystalline Silicon (c-Si) Solar Panel, is a type of solar energy conversion device that harnesses sunlight and converts it into electricity. These modules are composed of multiple interconnected photovoltaic cells made from high-purity crystalline silicon, which is the most common material used for solar panels. The crystalline structure of the silicon allows for efficient absorption of photons and the generation of electron-hole pairs, which in turn produce an electric current. Crystalline Photovoltaic Modules are known for their high efficiency, durability, and relatively low cost compared to other types of solar panels. They are widely used in residential, commercial, and utility-scale solar power installations due to their proven reliability and performance over time.
