Report Overview

CTC (Cell to Chassis) and CTB (Cell to Body) batteries for Electric Vehicles (EVs) refer to innovative battery integration technologies that aim to enhance the performance, safety, and efficiency of electric vehicles. These technologies involve the direct integration of battery cells into the vehicle's chassis or body structure, eliminating the need for a separate battery pack. By doing so, they can increase the energy density, reduce weight, and improve the overall structural rigidity of the vehicle. CTC and CTB batteries also contribute to better thermal management, as the batteries are more closely integrated with the vehicle's cooling systems. This integration can lead to improved range, faster charging times, and a more efficient use of space within the vehicle, which can be particularly beneficial for electric vehicles as it allows for a more spacious interior or additional storage capacity.
