Report Overview

Currettes and Scaling Equipment are essential dental instruments used in the process of periodontal therapy and dental hygiene. Currettes are small, sharp, scoop-shaped tools designed for removing dental calculus (tartar) and plaque from the tooth surface, particularly in the areas around the gum line. They come in various shapes and sizes to accommodate different areas of the mouth and tooth surfaces. Scaling equipment, on the other hand, refers to the broader range of tools used for scaling, which includes currettes, ultrasonic scalers, and hand scalers. Ultrasonic scalers use high-frequency vibrations to break down and remove tartar, while hand scalers are manual instruments that dental professionals use to scrape off tartar. These tools are crucial for maintaining oral health by preventing gum disease, tooth decay, and other dental issues.
