### Report Overview

A Customized Ti Sputtering Target is a specialized material used in the process of physical vapor deposition (PVD), specifically sputtering. This product is made from titanium (Ti), a strong, lightweight, and corrosion-resistant metal. The target is custom-tailored to meet specific dimensions, purity levels, and thickness requirements as dictated by the client's application needs. In the sputtering process, the target is bombarded with high-energy particles, causing atoms to be ejected from its surface and deposited onto a substrate to form a thin film.
