### Report Overview

Cutoff single-mode fiber is a specialized type of optical fiber designed to operate in single-mode at specific wavelengths by ensuring that higher-order modes are effectively suppressed beyond a defined cutoff wavelength. This fiber is engineered to minimize modal dispersion, making it ideal for high-speed, long-distance telecommunications, data centers, and precision optical sensing applications where signal integrity and bandwidth efficiency are critical. The cutoff wavelength is a key parameter, as it determines the transition point where the fiber shifts from supporting multiple modes to strictly single-mode propagation, ensuring optimal performance in targeted wavelength ranges such as 1310nm or 1550nm, which are standard in optical communication systems. Its design often involves precise core/cladding dimensions and refractive index profiles to achieve the desired cutoff characteristics, balancing performance with manufacturing feasibility.
