### Report Overview

Cutting electrodes are specialized metal wires or rods used in the process of wire electrical discharge machining (WEDM), a type of advanced manufacturing technique. These electrodes are typically made from materials like brass, copper, or zinc, which have high electrical conductivity and are capable of withstanding the intense electrical discharges generated during the machining process. The primary function of cutting electrodes is to erode material from a workpiece by creating a series of controlled electrical discharges between the electrode and the workpiece, which are submerged in a dielectric fluid. This process allows for high precision and accuracy in cutting complex shapes and intricate designs, making cutting electrodes essential in industries such as aerospace, automotive, and precision engineering.
