Report Overview

A Cutting and Scoring Balloon Catheter is a specialized medical device used in angioplasty procedures to treat narrowed or blocked arteries. It features small blades or scoring elements on the balloon's surface, which, when inflated, create controlled incisions or scores in the arterial plaque. This design helps to effectively dilate the artery by fracturing the plaque and minimizing the risk of arterial wall dissection compared to traditional balloon angioplasty. The cutting and scoring action enhances the precision and safety of the procedure, making it particularly useful for challenging lesions and calcified plaques.
