### Report Overview

CXCR4 antagonists are small-molecule which block the CXCR4 receptors and prevent their activation. Blocking the receptors stop the receptors' ligand, CXCL12, from binding which prevent downstream effects. CXCR4 antagonists are especially important for hindering cancer progression because one of the downstream effects initiated by CXCR4 receptor activation is cell movement which lead to tumor growth and metastasis in cancer patients. The CXCR4 receptor has been targeted by antagonistic substances, these antagonists have prospective use as therapeutic drug agents, and are currently under development in labs worldwide.
