Abstracts

Cyclopentadienylindium(I), whose chemical formula is C_5H_5In , is usually abbreviated as cpin (CP⁻ is cyclopentadienyl anion). It is an organic indium compound containing + 1 oxidized indium and a cyclopentadienyl complex with semi sandwich structure. It is the first (1957) low-cost organic indium compound found and reported. It can be used in medicine and electronic deposition technology. The Cyclopentadienylindium(I) market, which deals with compounds involving the unique combination of cyclopentadienyl ligands and indium in its +1 oxidation state, is a niche but intriguing segment in the chemical industry. Indium(I) compounds are renowned for their reactivity and potential applications in organometallic chemistry. Cyclopentadienyl ligands, on the other hand, are versatile and often used as stabilizing agents in organometallic complexes. The combination of the two, as seen in Cyclopentadienylindium(I), presents opportunities for catalysis, materials science, and semiconductor technology. Researchers and industries focused on semiconductor fabrication and specialized catalytic processes are among the primary beneficiaries of this market. While it may not be as widespread as some other organometallic compounds, the Cyclopentadienylindium(I) market underscores the ongoing exploration of unique chemical combinations to drive innovation and advancement in these specialized fields.

The global Cyclopentadienylindium(I) market size was estimated at USD 55.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
