Abstracts

The cylindrical battery stacking machine automatically realizes the stacking process of the battery core, stacks the positive electrode sheet, diaphragm, and negative electrode sheet in order to form a small battery cell, and then stacks and connects the small battery cells in parallel to form a large battery cell. During the stacking process, the diaphragm is actively unwound, and the stacking table drives the diaphragm to move back and forth to form a Z-shaped stack. After the stacking is completed, it is cut according to the set length and automatically sent out for manual glue application.
